# Celtic3d Services for Product Development & Marketing

Whether developing an idea, bringing a product to market, or selling to potential stakeholders, we can provide CAD, visualisation and physical models of your design to help you get your message across.

## Lightweight CAD Services

From your initial concept, we create your design in Autocad Fusion 360™ software. Each project lives in its own secure space which can be accessed online (requires an Autodesk™ account). Within the secure project space, collaborative tools allow you to review and comment as your design develops in real-time.

## Visualisation

Grab screenshots or image renders from your online CAD project space. We can also create high-quality renders and animation sequences of your design using the latest CGI software.

## Physical Models

Maximise engagement with your clients or investors with a physical model. Using cutting edge 3d printing capabilities in a wide range of materials and finishes with RAL colour matched paint to a professional standard. Models can be full size or a scale representation depending on your needs.

**CNC:** Our CNC capabilities are used to cut sheet material, engrave logos, carve wooden bases for display models or even create simple 1x sided printed circuit boards for prototyping.

**Labeling:** Adding a high-quality logo, title label or explanation panel can make a big difference to how a model is perceived. We print high-quality, colour labels up to A4 size on aluminium sheet with a choice of finishes.

**Peli Cases:** Celtic3d are distributors for Peli cases and can also provide custom-cut foam inserts for the cases to ensure you create the right impression with your clients.
